

Golf Variant.

Volkswagen

Highlights.

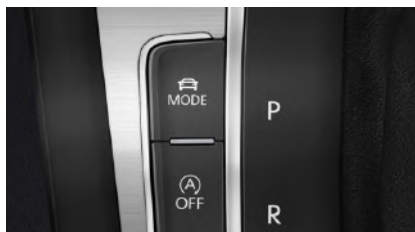

Powerful TSI engine

With a power output of 125 PS, the TSI engine of the Golf Variant delivers smooth, effortless performance in all driving conditions, combined with class-leading fuel economy.

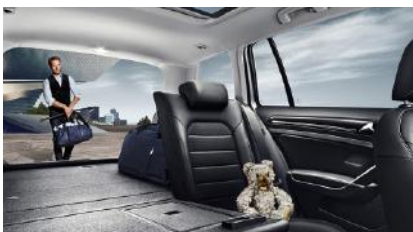

Bi-xenon headlamps

The bi-xenon headlamps on the Golf Variant are powerful and efficient. They also swivel to increase visibility around bends. LED daytime running lights are standard equipment as well.

Driving profile selection

Four driving modes are available at the touch of a button - Normal, Sport, Eco and Individual. In Eco, the engine management and climate control are optimised for low fuel consumption.

Spacious luggage compartment

There is 605 litres of space available with all the seats in place, and this goes up to 1,620 litres with the rear seats folded down. 4 practical bag hooks are also available in the boot.

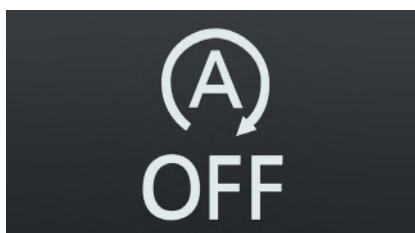

Touchscreen driver interface

Everything at your fingertips: the new generation infotainment system with its high-resolution 8-inch display includes App-Connect, which works with Apple CarPlay and Android Auto.

Electronic parking brake with Auto Hold

The electronic parking brake is easily operated and frees up extra storage space between the front seats. With Auto Hold, there's no need to step on the brake pedal when stationary.

Start-stop system

The start-stop system automatically switches off the engine when the car comes to a standstill. The engine only runs when it is actually needed, which helps to save fuel in city driving.

R-Line body styling

The R-Line exterior styling package includes sporty R-Line bumpers, a dedicated radiator grille, side sill extensions, a roof edge spoiler, a black gloss diffuser and 18-inch alloy wheels.

Safety.

Proactive occupant protection system

Fitted as standard on the Golf Variant, this system detects a potential accident situation, and reacts by tensioning the front seatbelts and closing the windows to maximise safety.

ESP

The ESP system keeps the car stable even in extreme driving conditions. It adjusts the engine's output and brakes individual wheels when it detects skidding, so the driver stays in control.
